

Setups Rating

A+

LIQUIDITY SWEEP and DELIVERY FROM FVG

Typically will have BOTH: liquidity sweep AND delivery from another FVG where bodies respect it absolutely perfectly

MOMENTUM WITH no CHOP

Must have strong momentum without chop through the iFVG and a quick reaction to the low/high

TARGETS ARE CLEAR (one of these 7)

There's always EQH, EQL, ITH, ITL, Data Highs, Data Lows, or trendline liquidity (LRLR) for a target

THE FVG WILL BE SINGULAR

If it isn't singular, check another time frame to see if (when combined) they are

PREMIUM/DISCOUNT

Long setups will typically be in discount and shorts in premium of the range (SMT's are a bonus)

A+ chart examples

Setups Rating

A

LIQUIDITY SWEEP or DELIVERY FROM FVG

A setups typically have either a liquidity sweep OR delivery from an FVG, not both

MOMENTUM

Doesn't need momentum RIGHT away like the A+ setup but still good momentum on the break (no chop)

TARGETS ARE CLEAR (one of these 7)

There's always EQH, EQL, ITH, ITL, Data Highs, Data Lows, or trendline liquidity (LRLR) for a target

THE FVG WILL BE SINGULAR

If it isn't singular, check another time frame to see if (when combined) they are

PREMIUM/DISCOUNT

Delivery from an FVG must be an *obvious* FVG in discount (for longs) or premium (for shorts) and SMT's are a bonus

*normal A setups you see on choppy bad days will be A-

A chart examples

Setups Rating

A-
(and B+)*

LIQUIDITY SWEEP or DELIVERY FROM FVG

A- setups typically have a liquidity sweep OR delivery from FVG like the A setups, not both

MOMENTUM WITH SOME CHOP

Likely to have momentum with a bit of chop through the iFVG and the trade can't take place until the body closes fully over/under the FVG

TARGETS ARE CLEAR (one of these 7)

There must be one of these as a target: EQH, EQL, ITH, ITL, Data Highs, Data Lows, or trendline liquidity (LRLR)

THE FVG WILL BE SINGULAR

If it isn't singular, check another time frame to see if (when combined) they are

PREMIUM/DISCOUNT

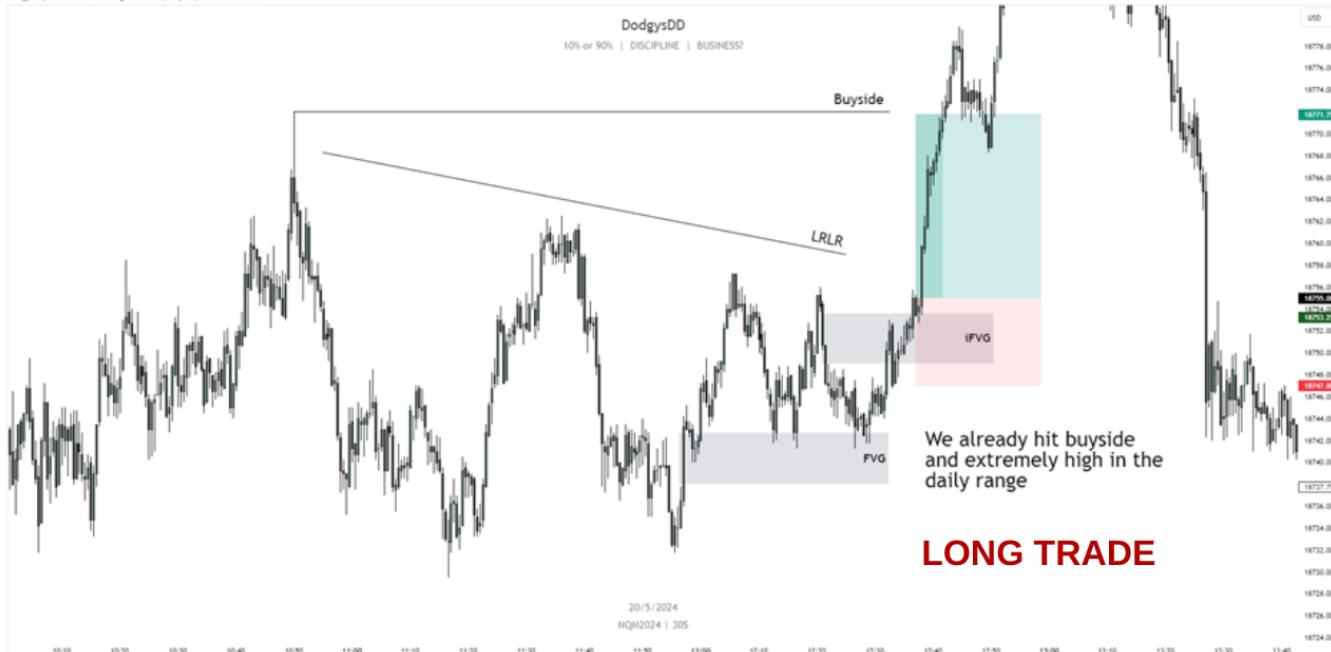

Long setups may be in premium and short setups may be in discount (SMT's remain a bonus)

*B+ setups are just A- setups on very choppy/bad days, where the setup and gap itself look super obvious with obvious eql, eqh, or itl/ith, but overall conditions are not amazing

Setups Rating

B

LACK OF LIQUIDITY SWEEP *and/or* DELIVERY FROM FVG

B setups usually are not delivering from anywhere and have no liquidity sweep, but may go along with bias still

MOMENTUM WITH CHOP

Likely to have momentum with a lot of chop through the iFVG and the trade can't take place until the body closes fully over/under the FVG

TARGETS ARE CLEAR (one of these 7)

There must be one of these as a target but unlikely to have multiple confluences: EQH, EQL, ITH, ITL, Data Highs, Data Lows, or trendline liquidity (LRLR)

THE SINGULAR FVG MAY NOT BE OBVIOUS

A singular FVG is not always going to be obvious, and it will lack other confluences besides maybe being with the bias

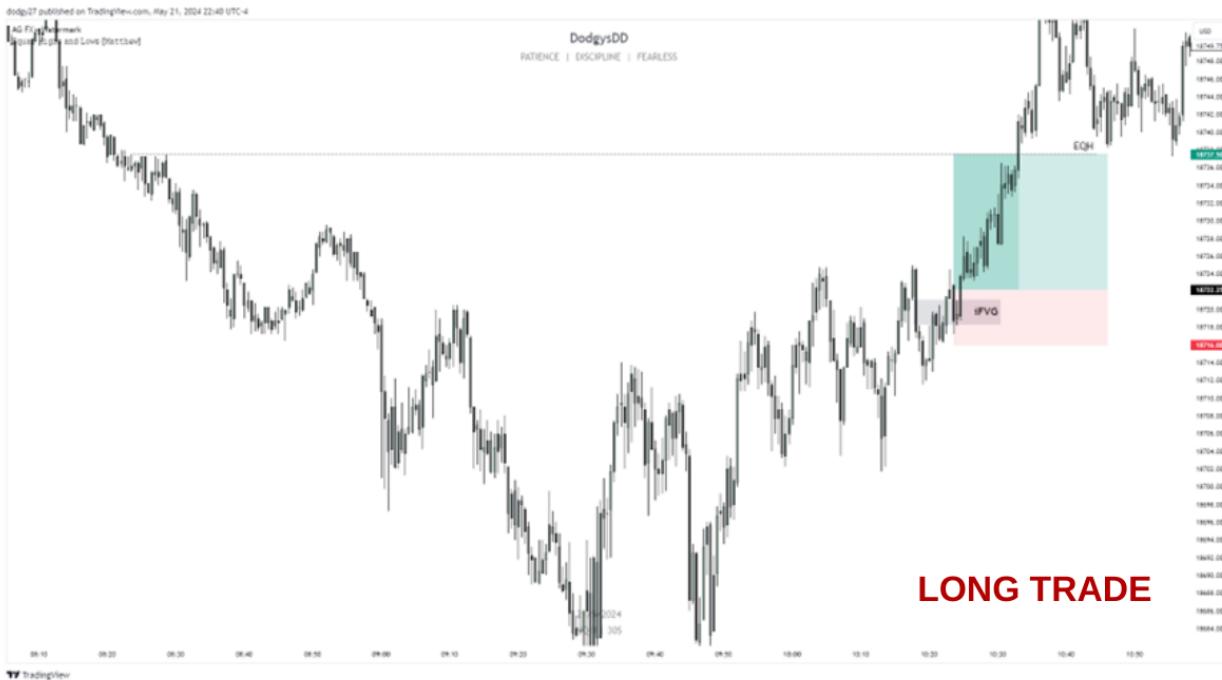

PREMIUM/DISCOUNT

Long setups occur in premium and short setups in discount (SMT's remain a bonus)

B chart examples

Setups Rating

B-

LACK OF LIQUIDITY SWEEP *and/or* DELIVERY FROM FVG

B- setups typically have no major sweep or delivery from anywhere but work *sometimes* if bias is right

LOW MOMENTUM WITH CHOP

Likely to have low or very little momentum with bad market conditions or low volume

NO REAL TARGETS

Risk: Reward sucks and the targets aren't clear but the setup *might* work if you're aligned with bias

THE FVG WON'T BE OBVIOUS

A singular FVG is not going to be obvious and price action will be messy (violating inverses back up and down again)

PREMIUM/DISCOUNT

Long setups occur in premium and short setups in discount (lucky to get an SMT to help move price)

B- chart examples

Setups Rating

C

NO LIQUIDITY SWEEP or DELIVERY FROM FVG

C setups are just horrible setups, you're trading in the middle of nowhere, and it does not make sense to take a trade

MOMENTUM WILL VARY

The momentum might not correlate to normal times where price will make a move and isn't predictable

NO REAL TARGETS or BIAS

You have no clue what bias is, also there's something else holding up/down price that makes the C setup not relevant

THE FVG WON'T BE OBVIOUS

A singular FVG is not going to be obvious and you're trying to find an FVG just to force a trade

PREMIUM/DISCOUNT

We tend to be way too low or high to take a setup in the same direction
